

# Routehappy Content API migration

28 June 2021

# Contents

1. New Routehappy API benefits
2. Choice of endpoints
3. Migration timeline
4. Resources

# Let's get ready for a better API.

## Key benefits of the new Routehappy API

1

Updated technology and architecture

2

Improved response times

3

Ability to process full itineraries

4

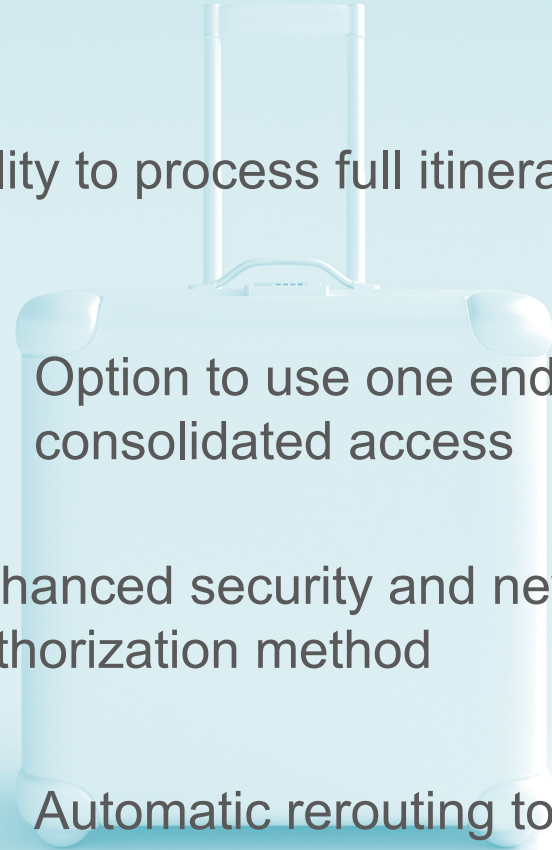

Option to use one endpoint for consolidated access

5

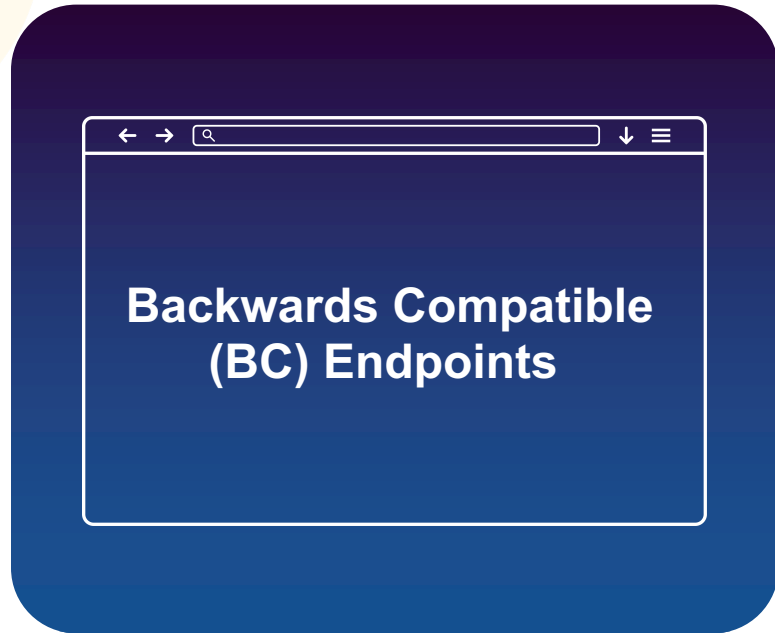

Enhanced security and new authorization method

6

Automatic rerouting to multiple deployments for high availability

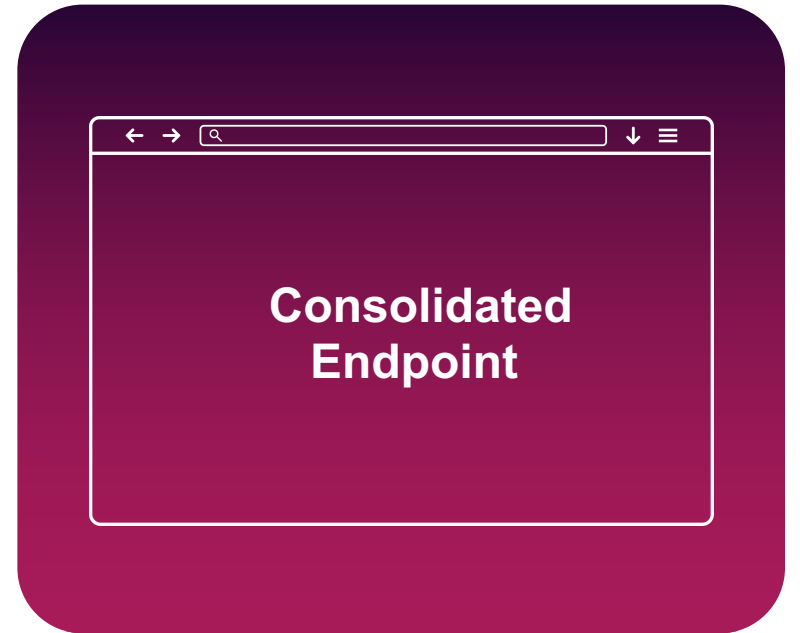

# New API endpoints

**Amenities BC:** For Amenities data

**Hub BC:** For UPAs + UTAs

Consolidated access to all  
3 content types (Amenities,  
UPAs, and UTAs)

# Which path will you take?

## Backwards Compatible Endpoints

- **Interim solution:** Will still need to migrate to Consolidated endpoint later
- Only available to current Routehappy API customers
- Easy migration: only need to change the URLs and authorization method
- Best choice if there are resource constraints and not ready for new schema
- No new functionality will be added to this endpoint; the full migration to the Consolidated endpoint will be needed later

## Consolidated Endpoint

- **Full migration:** This endpoint has a new, more intuitive schema
- One (1) request can include all rich content types with a new request/response structure
- Recommended for full fare coverage
- Includes new functionality such as corporate fare by rule processing
- Best choice for new functionality; this will be the endpoint that continues to be developed and enhanced

# Ready to get started? Here's what to do.

Contact your ATPCO Integrations Account Manager to get new API credentials

Talk to your development team and select your migration path and timeline

- Migrate to Backwards Compatible Endpoint now and plan the Consolidated migration later, or
- Migrate to Consolidated Endpoint now

# Keep in mind

- Start your migration as soon as possible to allow ample time to test and reap the new benefits
- We plan to discontinue the legacy Routehappy APIs by November 2021\*
